

Product information

G Data InternetSecurity for Netbooks 2011

Simple. Secure. Ressource saving.

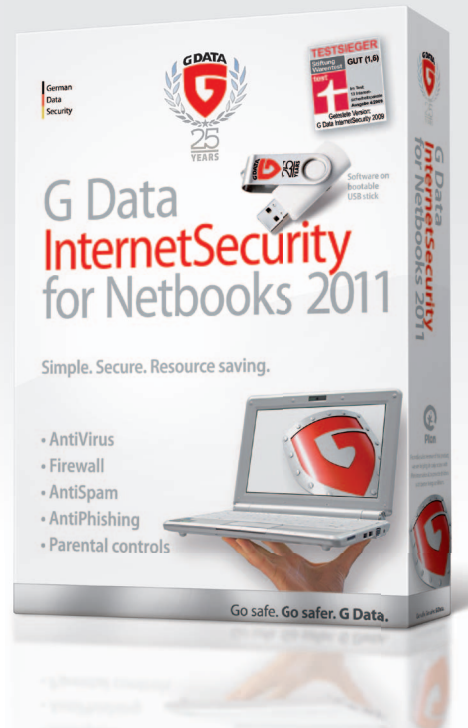

Alongside improved award-winning virus protection and optimisation of the intuitive user guidance, G Data InternetSecurity for Netbooks also protects all on-line activities by means of a „silent“ firewall. Operating invisibly without any loss of computing power or user-stressing querying, it successfully blocks hackers, viruses and spam. Simple and secure installation using the enclosed USB stick.

Maximum security from the record test winner:

- Constant optimum virus detection
- For many years the quickest response time to new viruses
- The latest methods for detecting unknown viruses (behaviour blocking, heuristics, cloud security)

Simple user guidance - ideal for beginners:

- With new “one click” user interfaces - everything at a glance
- Automatically carries out all protection functions undetected in the background
- Silent firewall without annoying querying

Includes a year's licence inclusive of hourly virus updates, new software updates and version upgrades. With 24h/365 day service hotline.
