

## Product information

# G Data ClientSecurity Business

Modern, high-performance corporate networks are extremely mobile and therefore at extreme risk. Thus it is extremely important that all network clients receive the best possible protection, but without in any way impeding their performance. With **G Data ClientSecurity Business** you can protect all the clients in your corporate network, efficiently, quickly and reliably with client/server-based, best-in-test virus protection and an award-winning client firewall all combined with intuitive, 100 % centrally controlled administration that is child's play to use.

### Award-winning technology

- Improved DoubleScan technology for optimum virus detection
- Self-learning fingerprinting and whitelisting ensures no loss of PC performance
- The latest methods for detecting unknown viruses (heuristics, cloud security)

### G Data ManagementServer

- Installation, scans, updates, settings and reports remotely controlled on the network (LAN/WAN) via TCP/IP
- Remote administration of all PCs / Web interface
- Cascading and disaster protection for server software
- Restoration of older signature statuses (rollback)

### G Data AntiVirus Client

- Client protection runs in the background, "invisible" to users
- E-mail virus blocker for Outlook, POP3 and IMAP
- Fully integrated Linux clients

### G Data Firewall Client

- New client firewall
- 100 % central administration
- Setup in just a few minutes
- Autopilot or central rule sets
- Simple setting of rules via dialogue, assistant or from reports
- Listing of blocked applications
- Optional offsite-configuration for notebooks

### G Data AntiSpam Client

- Client-side spam OutbreakShield
- Multiple, award-winning spam real-time protection

### G Data PremiumSupport

- Hourly virus signature updates
- Free software updates and version upgrades
- Advice by telephone and email, 24/7 all year round
