

Product information

NEW: G Data EndpointProtection Business

The all-in-one security solution for small, medium and large corporate networks. With optimum, performance-optimised protection against malware threats for laptops, desktops, and servers - PLUS PolicyManager for individual devices, applications and Internet control as well as a content filter for ensuring your corporate policy is correctly implemented in the work place. **G Data EndpointProtection Business** combines client/server-based, best-in-test virus protection with an award winning client firewall and effective, productivity increasing client settings. For optimum protection against hacker attacks, viruses and spam as well as legal security in respect of the use of corporate PCs. Simple and intuitive operation with a 100% central administration.

"Investigations have shown that 2/3 of corporate Internet traffic is purely private. In Germany alone the resulting financial loss is estimated at over 50 billion euros. Businesses require a security policy and G Data EndpointProtection. The new corporate solution provides effective protection against malware AND a means of implementing the corporate policy. You define who surfs, when and where, and prevent the use of USB sticks and undesirable programs. Result: more legal security and an increase in productivity."

Dr. Dirk Hochstrate, Board Member G Data Software

Award-winning technology

- New DoubleScan technology for top virus detection
- Self-learning fingerprinting and whitelisting ensures no loss of PC performance
- The latest methods for detecting unknown viruses (heuristics, cloud security)
